

The aim of building biology is - beyond the development of environmentally friendly and CO2-saving solutions - to create healthy, attractive and robust living and working environments.

VelværeHUS Helhetlige romkonsepter is a consulting and planning office located on Nesodden, a peninsula near Oslo.

The owner of the office, Nicole Schalin, architect and building biologist, completed her degree as a building biologist at the IBN in 1999 and since then was running a planning office and Building Biology counselling centre in Bad Homburg, Germany. Since her move to Norway in 2008, it has been a matter of the heart to promote building biology in Norway as well. Among other things, she gives lectures on the topics "Choice of materials and indoor climate" and "The healthy nursery".

In December 2018, VelværeHUS became an BBC partner of the IBN and contact point for students of the Building Biology Consultant Course IBN in English language in Norway.

Due to an extensive network in the field of green building in Norway, we can offer both supplementary learning groups and in-depth seminars on the topics of building biology measurement technology, indoor climate, material science, earth building etc. in Norwegian (and on request also in English and German) language.

For more information, see <https://www.velvaere-hus.no/byggbiologi>

Contact person for everyone interested in the course and in building biology in general: Nicole Schalin
